

## Loadmaster Help Sheet - TPN Unique Override Pricing

You can charge customers in a variety of ways but to retain a TPN style of charging use the TPN Unique Pricing Override. This is found on Setup/Networks/TPN/TPN Pricing/ TPN Unique Override.

This works in EXACTLY the same manner as the normal TPN Pricing Override but only comes into effect if the customer/service/pallet type match.

Choose the Account then the Service then fill the screen out as required.

The screenshot shows a software window titled "TPN Unique Override" with a close button (X) in the top right corner. The window contains several input fields and checkboxes for configuring pricing overrides. At the top right, there are "SAVE" and "Cancel" buttons. The main configuration area includes:

- Account Ref: ZIP001
- TPN Service Code: ND
- From Zone: [dropdown] To Zone: 1
- Use Quarter Pallets:  (Quarter Charge: 0.00, Charge per pallet: 36.00, Upto items: 1, Then charge: 36.00)
- Use Half Pallets:  (Half Charge: 0.00, Charge per pallet: 37.00, Upto items: 1, Then charge: 37.00)
- Use Full Pallets:  (Full Charge: 0.00, Charge per pallet: 0.00, Upto items: 0, Then charge: 0.00)
- Use Half Oversize Pallets:  (H/O/S Charge: 0.00, Charge per pallet: 0.00, Upto items: 0, Then charge: 0.00)
- Use Oversize Pallets:  (Oversize Charge: 0.00, Charge per pallet: 0.00, Upto items: 0, Then charge: 0.00)

Below the main configuration, there are three sections for replication:

- To replicate the charges from one zone to another pick an existing rate and put a value in this To Zone box then hit CLONE** (To Zone: [dropdown], Clone button)
- To replicate the charges from one service to another single service then pick an existing rate and put a value in this Service box then hit CLONE** (Service: [dropdown], Clone button)
- SPAWNING mass replicates an existing rate to another set of services in the same zone for the same customer. This bulk updates a series of services that you select. A new window will open where you can select these.** (Spawn button)
- To replicate the charges from this customer to another customer then put a value in this Account box then hit CLONE** (Account: [dropdown], Clone button)

A note at the bottom states: "The charges marked \* are normally set to zero unless you wish to add this to the entire consignment"

This works in exactly the same way as TPN Pricing Overrides.

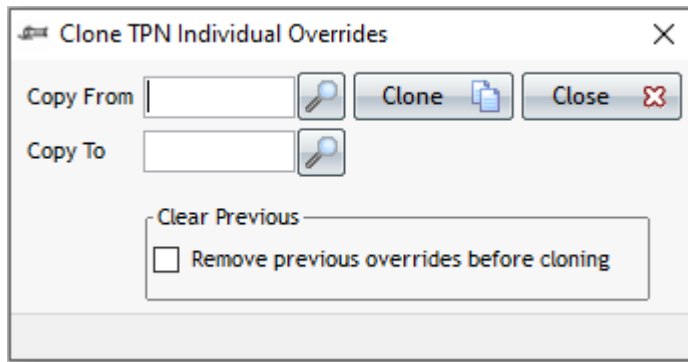

You tick the Use box to apply the different types of freight. The boxes marked with a \* are added to the computed charges and in general should be zero.

On the example, only Quarter Pallets and Half Pallets are affected by these prices. Full pallets will be priced by the rates set in the Global Pricing.

The options at the bottom allow replication of the current rate.

1. You can copy the current rate to a different zone.
2. You can copy the current rate to a different service.
3. You can mass replicate to another set of services for the existing zone.
4. Replicate the rate to another account.

Note: to mass replicate all the rates from one customer to another then use the clone function.

Mass replication opens a further screen where you can select other services to copy the same rate.
