

Resolving issues with TPN Invoicing and TPN SOAP

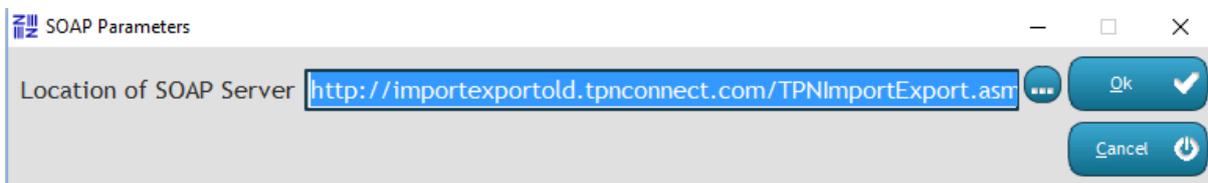

Most problems that we encounter are simply due to not setting these up properly.

If you cannot download any data then check these options.

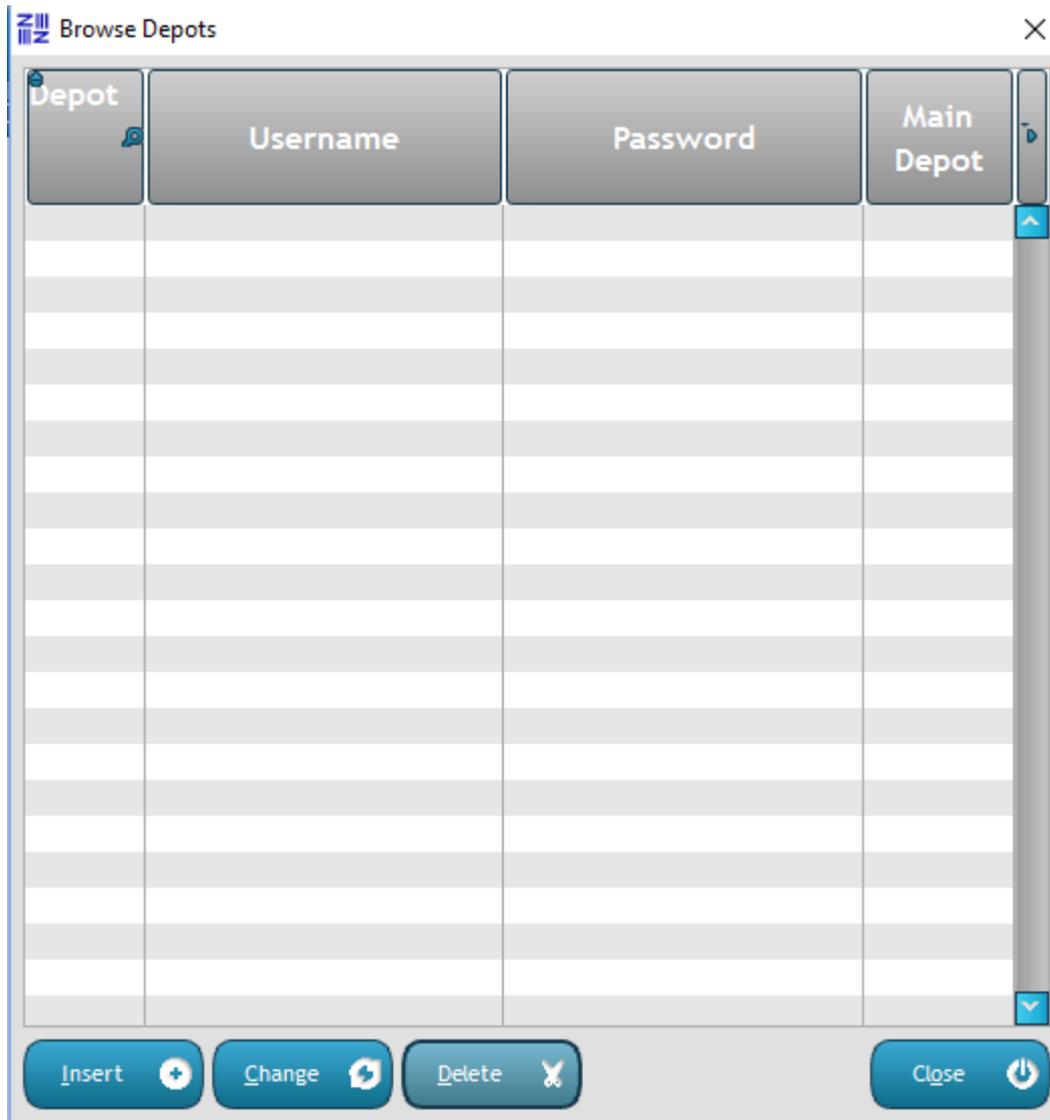

TPN SOAP

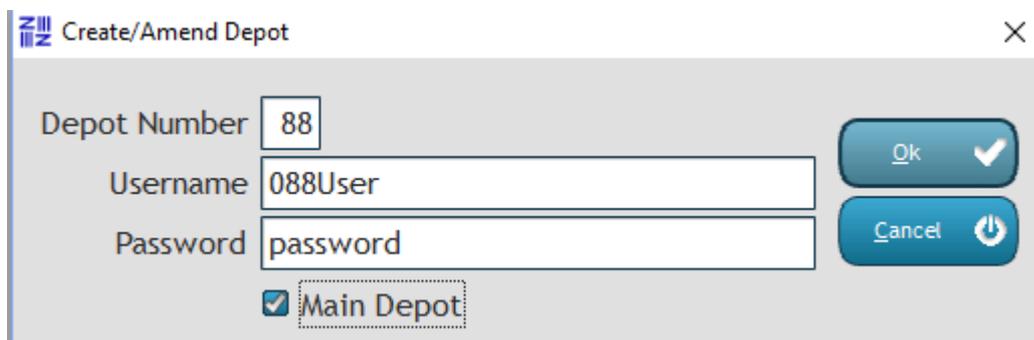

Go into **Parameters** and ensure the line is not blank. If it is then click on the [...] button and it will insert a line automatically.

Now go into **Depots**. This should contain details of the depots that you cover. Is this blank?

If so, click on Insert and complete the options.

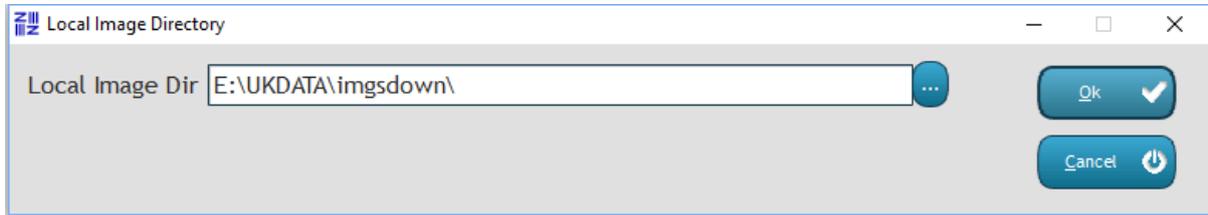

The username and password **MUST** be valid to log onto TPN Connect or it will not work.

Tick the main depot if appropriate. If you only have one depot code then tick this.

Click OK.

Now go into **Image Dir.**

This should point to the directory on your network where POD images are going to be stored. Note that this is normally a directory called imgsdown which is under your data directory.

Now go into **Datapath.**

This is where your data files are located and is normally the same one that appears on the top line of TPN Invoicing.

TPN Invoicing

The following should be checked.

In Setup/Parameters/Company

Company Settings

Main Sage (Local) TPNSoap (Local)

Code: 011

Name: STARLING TRANSPORT & STORAGE

Address: THE DSV SOLUTIONS SITE
